

BIOMASS BOILER Workshops

Announcing Our 2016 Biomass Boiler Workshops

- New Orleans, Louisiana, May 5-6, 2016
- Seattle, Washington, September 22-23, 2016

Since 2000, these workshops have been attended by well over 1000 representatives of numerous plants in the Pulp/Forest Products and Food Industries, Power Sector, Independent Power Producers and Energy-from-Waste Industry.

The workshops consist of presentations about new technological developments and results to improve the operating performance, fuel burning capacity, efficiency, and fuel economy of biomass-fired boilers (mostly stoker-fired). In addition, the program will include troubleshooting and problem solving discussions of challenges that attendees bring to the workshop. Participants will benefit by: 1) learning about the latest retrofit technology for biomass boilers and associated equipment; 2) seeing how other plant operations solve their biomass boiler area problems; and 3) receiving information and solutions to their specific problems. **Attendance to the workshop is free of charge; space is limited.**

► In the past fifteen years, JANSEN has upgraded the performance of over 80 biomass and solid waste-fueled boilers in our industries. Typically, these upgrades have achieved:

- Significant increase in biomass burning capacity and reduced fossil fuel firing.
- Improved emissions performance (CO, VOC, NOx, particulate matter).
- Reduced carryover and lower unburned carbon losses.
- Reduced erosion by limiting ash carryover.
- Reduced excess air and increased thermal efficiency.
- Boiler MACT regulatory emissions compliance.
